

**NOTIFICATION OF AQUATIC TREATMENT
WEBSTER LAKE, WEBSTER MA**

Areas of Webster Lake will be chemically treated with USEPA/MA registered aquatic herbicides on Wednesday, July 1, 2015 to control nuisance and invasive aquatic vegetation. The entire lake will be closed for swimming and other water contact recreation on the day of treatment only (July 1st). In addition, the lake water cannot be used for drinking, irrigation (i.e.; watering lawns, gardens or plants of any kind) and consumption by livestock (refers to cattle, horses, etc., - note that pets/wildlife will not be harmed that may ingest the lake water while swimming) for a period of five days, commencing on the day of treatment. The Town Boat Ramp will be closed to launching of boats on the day of treatment and the Town Beach will also be closed. A map of the lake showing the treated/restricted areas will be posted at both the town and state boat launches and it is also available on the Webster Lake Association's web-site (<http://www.websterlakeassociation.org>). Printed signs, warning of these and any other water use restrictions will be posted around the lake shoreline in advance of treatment. The work is being performed under a License to Apply Chemicals permit issued from MA DEP and an Order of Conditions from the Webster Conservation Commission. Aquatic Control Technology of Sutton will be performing this work for the Webster Lake Association.
